

HEXA Design Spec v3

HEXA — DESIGN SPECIFICATION (v3)

Companion to: [HEXA_BUILD_SPEC.md](#) **Version:** 3.0 **Last updated:** 2026-05-29 **Target platforms:** iOS 16+ and Android 9+ **Stack assumption:** Expo React Native + NativeWind (Tailwind) + react-native-reanimated

For Claude Code: This is the visual + interaction specification for Hexa. Read the relevant Screen section before building any screen. All values (colors, spacings, font sizes, durations) are exact and not suggestions — use them verbatim. When you need a design decision that isn't specified here, ask before guessing.

Changelog v2 → v3

- **Added 5 Clan screens for Phase 11 (Month 4):**
 - Clan Hub / My Clan (\$6.21)
 - Clan Discovery & Browse (\$6.22)
 - Clan Creation Form (\$6.23)
 - Clan Detail — public view (\$6.24)
 - Clan Members & Roles management (\$6.25)
- **Added 3 Community Feed screens for Phase 13 (Month 5+):**
 - Feed — Explore (\$6.26)
 - Feed — Following + composer (\$6.27)
 - Feed — Locked state for L1 users (\$6.28)
- **Bottom nav restructure noted for Phase 13:** Friends moves into Profile as sub-section, Feed becomes the 4th tab (\$4.1)
- **Leaderboard updated** with a Clans sub-toggle that appears once user reaches L3+ (\$6.12)
- **Microcopy expanded** with clan and feed strings (\$8)
- **Explicitly skipped:** Entry Vault sweepstakes mechanic — sits in PROGA 2025 grey zone; we stay on closed-loop brand-funded vouchers instead

Changelog v1 → v2

- **Color scheme locked** as saffron `#FF6F00` after evaluating coral, Cult-red, and teal alternatives (\$2.1)
- **Added 4 new components** in §3: Sub-toggle (§3.11), Hold-to-confirm button (§3.12), Feature gate card (§3.13), Headline metric row (§3.14)
- **Profile/Stats expanded** with “Next Unlock” progression row and XP Challenges horizontal scroll (\$6.11)
- **Leaderboard formalized** to use sub-toggle component for region + timeframe filters (\$6.12)
- **Settings menu fully restructured** into 9 groups including Referrals, Integrations, Pro & Vouchers (\$6.15)
- **4 new screens added for Phase 10 Paths feature:**
 - Walk Session — Active Tracking (\$6.17)
 - Walk Session — Finish Confirmation (\$6.18)
 - Walk Session — Log Walk (\$6.19)
 - Referral Code Entry (\$6.20)
- **Microcopy expanded** with walk-session and referral strings (\$8)

1. DESIGN PHILOSOPHY

Three principles that override everything else

1. The map is the product. The home screen is a map first, a UI second. Every UI element on the map screen must justify why it's covering even 1px of map real estate. When in doubt, hide it behind a tap.

2. Loss aversion drives the loop. Every screen should make it easy to see what you might lose (streak, rank, hexes) and immediately fix it. Push notifications, banners, badges — all framed as “Rohit stole 3 of your hexes” not “+30 points available.”

3. Dark by default. Saffron for moments that matter. The base UI is near-black with high-contrast text. Saffron `#FF6F00` is reserved for: your owned hexes on the map, primary CTAs, your name on leaderboards, capture celebration moments, and the active streak. Using saffron everywhere kills the impact of saffron anywhere.

Brand personality

Hexa is **playful but not childish, competitive but not toxic, Indian but not stereotyped**. Think Splitwise's clarity + Strava's data depth + Duolingo's emotional pull + Snap Map's visual juice. Not Pokémon Go's anime-cute, not Cult.fit's aggressive intensity.

The mascot/voice is a friend who's already three streets ahead of you and texting “where are you 🤖” — playful taunting, never preachy about health.

2. DESIGN SYSTEM: TOKENS

2.1 Color palette

```

// tailwind.config.js or theme constants
export const colors = {
  // Brand
  saffron: {
    50: '#FFF3E0',
    100: '#FFE0B2',
    200: '#FFCC80',
    300: '#FFB74D',
    400: '#FFA726',
    500: '#FF9800',
    600: '#FF6F00', // PRIMARY brand color
    700: '#E65100',
    800: '#BF360C',
    900: '#8B2500',
  },

  // Neutral (dark mode default)
  ink: {
    0: '#000000', // True black, reserved for OLED states
    50: '#0A0A0A', // App background
    100: '#141414', // Elevated surface (sheets)
    200: '#1F1F1F', // Cards
    300: '#2A2A2A', // Hover/pressed cards
    400: '#3D3D3D', // Borders, dividers
    500: '#5C5C5C', // Disabled text
    600: '#8A8A8A', // Caption text
    700: '#B0B0B0', // Secondary text
    800: '#D6D6D6', // Body text
    900: '#F5F5F5', // Primary text on dark bg
  },

  // Semantic
  success: '#00C853', // Capture success, level up
  danger: '#FF3D00', // Hex stolen, errors
  warning: '#FFAB00', // Streak at risk, GPS weak
  info: '#2962FF', // Tips, notifications

  // Map / Player colors (the 8 user-pickable hex colors)
  playerColors: {
    saffron: '#FF6F00', // default
    teal: '#00ACC1',
    purple: '#7B1FA2',
    crimson: '#C2185B',
    forest: '#2E7D32',
    sky: '#1976D2',
    coral: '#FF5252',
    gold: '#FFB300',
  },

  // Map base layer (light map under dark UI)
  map: {
    base: '#F5F1EB', // warm off-white land
    water: '#C7D9E8',
    road: '#FFFFFF',
    park: '#D4E5C7',
    neutral: 'rgba(180, 180, 180, 0.25)', // unowned hex fill
  },

  // Translucent overlays for glassmorphism on map
  glass: {
    light: 'rgba(255, 255, 255, 0.85)',
    dark: 'rgba(10, 10, 10, 0.75)',
    blur: 'rgba(20, 20, 20, 0.6)', // with backdrop-blur
  },
}

```

Rules: - Default text color: **ink.900** on **ink.50** background (contrast ratio 18.4:1) - Secondary text: **ink.700** - Body text on cards: **ink.800** - Never use saffron for body text (only for highlights and CTAs) - Hex ownership colors are the *only* permitted colors on the map polygons - Light mode is **post-MVP** — ship dark only for v1

2.2 Typography

Font family: **Inter** (free, Google Fonts). Load weights: 400, 500, 600, 700, 800. Devanagari/Tamil/Kannada glyphs covered by Inter's extended set.

Type scale:

Token	Size	Line height	Weight	Use
display-xl	64	72	800	Capture success number, level up
display-lg	48	56	700	Onboarding hero, big stats
display-md	36	44	700	Page titles when no nav bar
display-sm	28	36	700	Section headers
heading-lg	24	32	600	Card titles, sheet headers
heading-md	20	28	600	Subsection headers
heading-sm	18	26	600	List item titles
body-lg	16	24	400	Default body
body-md	15	22	400	Card body, descriptions
body-sm	14	20	400	Captions, helper text
label-md	14	20	500	Form labels, button text
label-sm	12	16	500	Tags, badges, micro-labels
mono-md	16	24	500	Numbers (use Inter tabular-nums)

Tabular numbers: Always use `fontVariant: ['tabular-nums']` for any number that animates or counts (points, timer, streak count, hex count). Prevents layout shift.

2.3 Spacing scale

4-based scale (Tailwind defaults map perfectly):

Token	Value (px)	Common use
0	0	Reset
1	4	Icon-to-text micro gap
2	8	Inline padding, tight gaps
3	12	Default vertical rhythm
4	16	Card padding, section gap
5	20	List item padding
6	24	Section padding
8	32	Major section gap
10	40	Hero spacing
12	48	Screen padding (top/bottom)
16	64	Empty state vertical

Screen edge padding: always **16 (4×4)** for full-width content on phones. Cards inset further as needed.

2.4 Border radius

Token	Value	Use
none	0	Full-bleed images
sm	8	Tags, small chips
md	12	Default for buttons, cards, inputs
lg	16	Large cards, hero sections
xl	24	Bottom sheets (top corners only)
2xl	32	Hero cards (rare)
full	9999	Avatars, pill buttons, fab

2.5 Shadow / elevation

iOS-style soft shadows. On dark mode, shadows are subtle — use border + slight backlight instead.

Token	Value	Use
<code>none</code>	—	Flush surfaces
<code>xs</code>	<code>0 1px 2px rgba(0,0,0,0.4) + inset 0 1px 0 rgba(255,255,255,0.04)</code>	Buttons resting
<code>sm</code>	<code>0 2px 8px rgba(0,0,0,0.5)</code>	Cards on dark bg
<code>md</code>	<code>0 8px 24px rgba(0,0,0,0.55)</code>	Floating buttons, FAB
<code>lg</code>	<code>0 16px 48px rgba(0,0,0,0.6)</code>	Bottom sheets, modals
<code>glow-saffron</code>	<code>0 0 24px rgba(255, 111, 0, 0.4)</code>	Active capture states, celebration

2.6 Iconography

Library: Tabler Icons (free, 5800+ icons, consistent stroke). Use outline style throughout. Stroke width 1.75. Size defaults to `24`. Available in React Native via `react-native-vector-icons` or directly as SVG.

Icon sizing: - `16` — inline with body text (e.g., “📅 5-day streak” — but use actual icon) - `20` — list items, secondary actions - `24` — default (nav, buttons) - `32` — primary actions - `48` — empty states, celebrations

Custom icons needed (you draw or commission): - Hex icon (filled hexagon for app icon, neutral hex for empty states) - Compass rose (custom map control) - Hexa wordmark (text logo)

2.7 Layout grid

- **Mobile:** Single column, 16px horizontal padding, content max-width = device width - 32
- **Tablet (post-MVP):** Same layout but max-width 480px centered (don't redesign for tablets — just constrain width)

Vertical rhythm: - 24px between major sections - 16px between cards within a section - 12px between rows within a card

2.8 Safe area

Always wrap screens in `<SafeAreaView edges={['top', 'bottom']}>`. Map screen uses `edges={['bottom']}` only (status bar overlays the map directly).

3. DESIGN SYSTEM: COMPONENTS

3.1 Button

Variants:

```
type ButtonVariant = 'primary' | 'secondary' | 'ghost' | 'danger' | 'glass'
type ButtonSize = 'sm' | 'md' | 'lg'
```

Primary — main CTAs, capture actions, level up confirm - Background: `saffron.600` - Text: `ink.50` (the dark bg color, for contrast) - Border radius: `md` (12) - Padding: `lg` size → 16px vertical, 24px horizontal - Font: `label-md`, weight 600 - Shadow: `xs` resting → `glow-saffron` on press (with scale 0.97) - Min touch target: 48x48

Secondary — alternate actions, “Maybe later,” “Skip” - Background: `ink.200` - Text: `ink.900` - Same dimensions as primary

Ghost — tertiary, in-row actions - Background: transparent - Text: `saffron.600` - No border, no shadow - Underline on press (subtle)

Danger — destructive (“Release hex,” “Sign out”) - Background: `danger` - Text: white

Glass — buttons on top of the map - Background: `glass.dark` (with `backdrop-filter: blur(20)`) - Text: white - Border: `1px solid rgba(255,255,255,0.1)` - Shadow: `md`

Sizes: - `sm`: 36px height, 12px horizontal padding, `body-sm` text - `md`: 44px height, 16px horizontal, `label-md` - `lg`: 56px height, 24px horizontal, `heading-sm`

States: - Resting: as specified - Pressed: scale to 0.97 (use `Pressable` with `transform`) - Disabled: opacity 0.4, no scale animation
- Loading: replace text with spinner, button stays same width (don't reflow)

3.2 Card

Default card: - Background: `ink.200` - Border radius: `md` (12) - Padding: 16 (or 20 for content-heavy cards) - Shadow: `sm` -
Optional: `1px solid ink.400` border for emphasis

Pressable cards (when card itself is tappable): - Scale to 0.98 on press - Subtle haptic feedback
(`Haptics.ImpactFeedbackStyle.Light`)

Card sub-patterns: - **Stat card:** Big number `display-md` saffron, label `body-sm` ink.700 below - **List card:** Avatar/icon left, title
+ subtitle stacked, chevron right - **Action card:** Icon top, title, body text, primary button bottom

3.3 Avatar

Sizes: 24, 32, 40, 48, 64, 96, 128

Style: - Always circular (border-radius full) - If user has uploaded photo: their photo - If not: gradient circle (saffron → coral) with
first letter of display name in white, weight 700 - Optional: 2px white border on dark bg - Online indicator dot (for friends feature,
post-MVP): 8px green dot bottom-right with 2px ink.50 border

3.4 Badge / Chip

Inline status indicators:

```
type BadgeTone = 'neutral' | 'success' | 'danger' | 'warning' | 'saffron' | 'info'
```

- Pill shape (border-radius `full`)
- Padding: 4px vertical, 10px horizontal
- Font: `label-sm`
- Background: tone color at 15% opacity
- Text: tone color at 100%
- Optional: icon left (size 14)

Examples: - `[12]` — streak badge - `[L3 Patroller]` — level badge - `[Fresh Paint 28m]` — hex state - `[+50]` — point gain
animation

3.5 Input field

Text input: - Background: `ink.200` - Border: `1px solid ink.400` resting, `2px solid saffron.600` focused - Border radius: `md`
(12) - Padding: 14px vertical, 16px horizontal - Font: `body-lg` - Placeholder: `ink.600` - Text color: `ink.900` - Label above: `label-`
`md`, color `ink.700`, 8px gap below - Error state: `2px solid danger` border, error text below in `body-sm danger` - Min height: 52

OTP input (special 6-cell input): - 6 cells, each 48×56 - 8px gap between cells - Same colors as text input - Single digit each, large
`heading-lg` centered - Auto-advance on digit entry - Auto-fill on iOS via `textContentType="oneTimeCode"`

3.6 Bottom sheet

For: hex detail, profile previews, share, settings sub-pages

- Library: `@gorhom/bottom-sheet`
- Background: `ink.100` (slightly lighter than app bg for elevation)
- Border radius: `xl` (24) top corners only
- Drag handle at top: 36×4 rounded pill, `ink.500`, centered, 8px margin from top edge
- Padding: 24px horizontal, 16px top (below handle), 32px bottom (above safe area)
- Backdrop: `rgba(0,0,0,0.5)` with tap-to-dismiss
- Snap points: depends on screen — usually [40%, 80%]
- Shadow: `lg`

3.7 Toast / banner

Top banner (for “Hex stolen” notifications): - Position: absolute top, 16px below safe area - Background: `glass.dark` +
backdrop blur - Border radius: `lg` (16) - Padding: 12px horizontal, 12px vertical - Layout: avatar left → text middle → “Get back”
button right - Border: `1px solid danger` at 30% opacity (subtle red tint) - Slide in from top, 300ms spring - Auto-dismiss after 5s OR

persist if “Get back” available - Tap → action; swipe up → dismiss

Toast (for confirmations): - Position: absolute bottom, 24px above tab bar - Background: `ink.100` - Border radius: `md` - Padding: 12 horizontal, 10 vertical - Icon left + text - Auto-dismiss 3s - Slide up + fade in

3.8 Progress indicator

Linear progress (for capture dwell timer): - Height: 8px - Background track: `ink.400` - Fill: linear gradient `saffron.500 → saffron.700` - Border radius: `full` - Animated width via Reanimated, 60fps

Circular progress (for level XP): - Ring stroke width: 6 - Track: `ink.400` - Fill: `saffron.600` - Center content: current value (big) + label

Spinner (loading): - Size: 24 default, 32 for full-screen - Color: `saffron.600` - Use `ActivityIndicator` with custom color

3.9 Tab bar (bottom nav)

- Height: 64 + safe area inset
- Background: `glass.blur` (frosted, very dark)
- Border top: `1px solid ink.400` at 50% opacity
- 4 tabs: Map, Leaderboard, Friends, Profile
- Each tab: icon (24) above label (`label-sm`)
- Active state: icon and label `saffron.600` , with a 4px circle dot 2px below label
- Inactive: icon and label `ink.700`
- Tap animation: scale 0.92 on press
- **Special:** Map tab icon is a hex shape, not a generic map pin

3.10 Empty state

- Vertical center
- Custom illustration or large icon (96px, `ink.500`)
- Heading: `heading-md` , `ink.900`
- Body: `body-md` , `ink.700` , max 2 lines, centered
- Primary CTA below (optional)
- Spacing: 24px between elements

3.11 Sub-toggle (segmented control)

For: filtering scope inside a tab or screen. Examples: “Pincode / Bangalore / Friends” on Leaderboard, “Week / Month / All-time” on stats.

- Pill-shaped container, full width or content-width
- Height: 36
- Background track: `ink.200`
- Border radius: `full`
- Padding: 4 internal
- Each segment: equal width inside the container
- Active segment: `saffron.600` pill background, white text (`label-md` , weight 600)
- Inactive segment: transparent, `ink.700` text
- Active pill animates on tap: 200ms ease-out slide
- Max 4 options; if more, switch to dropdown
- Subtle haptic on segment change

3.12 Hold-to-confirm button

For: destructive or irreversible actions where accidental taps must be prevented. Examples: “Hold to release hex,” “Hold to end session,” “Hold to discard walk.”

- Full width or content-width
- Height: 56
- Background: `ink.300` resting, fills with `danger` color as user holds
- Border radius: `md`
- Label: `label-md` , white

- Icon left (optional, 20px)
- Behavior:
 - Hold for 1500ms total to fire action
 - Progress fill animates from left edge to right as user holds
 - Haptic tick at 500ms, 1000ms (medium impact)
 - Haptic success + scale punch at 1500ms (action fires)
 - Release before 1500ms: progress animates back to 0 in 300ms, no action
- Display label changes mid-hold: “Hold to release” → “Holding...” → “Releasing...”

3.13 Feature gate card

For: showing locked features with explicit unlock instructions. Replaces silent “you can’t do this” experiences.

- Full-width card
- Background: `ink.200` with subtle saffron tint border (`1px solid rgba(255, 111, 0, 0.2)`)
- Padding: 24
- Border radius: `lg` (16)

Content layout (top to bottom): 1. **Lock icon** (32px, `saffron.600`) — centered 2. **8px spacing** 3. **Heading** (`heading-md`, `ink.900`): “Reach Level 3 to unlock Clans” — specific to what’s locked 4. **Level progress chip** (`badge`, `saffron` tone): “Level 2 — 850 / 2,500 XP” 5. **16px spacing** 6. **“How to level up” subhead** (`label-md`, `ink.700`) 7. **Numbered list** (3 items max), each row: - Number circle (24px, `saffron.600` bg, white digit) - Step text (`body-md`, `ink.800`) - 12px vertical gap between rows 8. **24px spacing** 9. **Primary button:** “Go to Profile” (jumps to Profile tab where XP challenges live)

3.14 Headline metric row

For: Showing 3-4 key numbers in a row. Used on profile, hex detail, capture success, walk summary.

- Horizontal row, equal-width cells
- Cells separated by 1px `ink.400` vertical divider (optional, depends on context)
- Each cell, vertically stacked:
 - **Big number:** `display-md` (36pt) or `display-sm` (28pt) depending on context, `ink.900`, `tabular-nums`
 - **Optional unit:** inline after number, `body-sm`, `ink.700` (e.g., “2.4” big + “km” small)
 - **4px gap**
 - **Label:** `label-sm` uppercase, `ink.600`, tracking 0.5px
- Cell padding: 12 vertical, 8 horizontal
- On small screens (<360px wide), drop to 3 cells max; on tablet, can fit 5

Standard Hexa stat rows: - **Capture Success:** IP gained · Streak · Today’s captures · Rank - **Profile hero:** Hexes held · Lifetime points · Streak - **Walk Summary:** Distance · Duration · Hexes captured · IP gained - **Hex Detail:** IP · PPH · Rarity

4. LAYOUT & NAVIGATION

4.1 App architecture

```

RootStack
├── (Auth flow, conditional)
│   ├── Phone Entry
│   ├── OTP Verification
│   ├── Onboarding Carousel (3 screens)
│   ├── Profile Setup (multi-step)
│   └── Permission Requests
├── (Main app)
│   ├── TabNavigator (after auth)
│   │   ├── MVP through Phase 12:
│   │   │   ├── Map (default tab)
│   │   │   ├── Leaderboard
│   │   │   ├── Friends
│   │   │   └── Profile
│   │   └── Phase 13+ restructure (when Feed ships):
│   │       ├── Map (default tab)
│   │       ├── Leaderboard
│   │       ├── Feed ← Friends absorbed into Profile sub-section
│   │       └── Profile (now includes Friends sub-page)
│   └── + Modal stack (presented over tabs):
│       ├── Hex Detail (bottom sheet)
│       ├── Capture Dwell (full screen)
│       ├── Capture Success (full screen)
│       ├── Medal Detail
│       ├── User Profile (other user)
│       ├── Clan Detail (Phase 11+)
│       ├── Clan Creation (Phase 11+)
│       ├── Walk Session Active (Phase 10+, full screen)
│       ├── Walk Log (Phase 10+)
│       ├── Share Card preview
│       └── Settings + sub-pages

```

Why 4 tabs not 5: Adding more tabs forces label truncation and cramped touch targets on small Android devices. When Feed ships, Friends becomes a Profile sub-section accessible via a “Friends” row in the Profile screen. This matches Discord’s “messages live in profile” pattern and keeps the nav bar uncluttered.

4.2 Screen transitions

- **Auth flow:** slide horizontal right-to-left (forward) and left-to-right (back)
- **Tab switch:** instant (no animation) — tab nav is positional
- **Modal:** slide up from bottom, 300ms
- **Bottom sheet:** spring up from bottom, 400ms (gorhom default)
- **Full-screen overlay (capture):** fade + scale from 0.95 → 1.0, 250ms
- **Celebration screen:** scale + spring, 600ms

4.3 Header bar

For non-map screens: - Height: 56 - Background: `ink.50` (same as app bg, no shadow) - Left: back arrow (24px, `ink.900`) or hamburger - Center: screen title (`heading-md`) - Right: 1-2 icon actions (24px)

For map screen: no header bar — just floating glass buttons over the map.

5. MOTION & ANIMATION

5.1 Timing values

```
export const motion = {
  // Durations (ms)
  duration: {
    instant: 100, // micro-interactions (button press)
    fast: 200, // hover, focus, toggle
    base: 300, // most transitions, modal in/out
    slow: 500, // celebrations, level ups
    crawl: 800, // hero animations, onboarding
  },

  // Easing curves (use Reanimated Easing)
  easing: {
    standard: 'cubic-bezier(0.4, 0.0, 0.2, 1)', // default
    decelerate: 'cubic-bezier(0.0, 0.0, 0.2, 1)', // entering
    accelerate: 'cubic-bezier(0.4, 0.0, 1, 1)', // exiting
    spring: { damping: 18, stiffness: 200 }, // spring config
    bounce: { damping: 10, stiffness: 200 }, // celebration spring
  },
}
```

5.2 Critical animations

Capture dwell timer: - 20-second circular progress ring filling from 0% to 100% - Color shifts: starts `saffron.300`, ends `saffron.700` - Pulsing glow on the outer ring at 1Hz when GPS is good - Pulse slows to 0.5Hz when GPS accuracy degrades - On completion: ring solidifies + scale punch + haptic

Capture success: - Sequence (total ~1.8s): - 0ms: full screen flash to saffron, 100ms - 100ms: hex icon scales from 0 to 1.2 (overshoot), 400ms, spring bounce - 200ms: scales down to 1.0 - 500ms: “+150 IP” number counts up from 0 to actual value, 600ms - 600ms: confetti particles burst (8 saffron hex shapes outward), 800ms - 1200ms: “Continue” button fades in - Haptic: `Haptics.NotificationFeedbackType.Success` at 100ms

Hex stolen banner: - Slides in from above safe area, 300ms spring - Subtle horizontal shake (3px each direction, 2 cycles) at 400ms - Persistent until tap or 5s auto-dismiss - On dismiss: slide up + fade

Streak nudge animations: - Flame icon  (use Lottie file `flame-active.json`) at 30fps loop - When streak is at risk (no capture today and after 6pm): flame gets a faint red glow

Number counting: - All point counters (current points, daily cap, lifetime) use a “rolling counter” effect - 800ms duration, ease-out - Use `react-native-reanimated` shared value with derived display

Map hex capture animation: - When YOU capture a hex: hex fill animates from neutral to your color over 600ms, with a brief expanding glow ring - When you LOSE a hex (realtime update from server): hex briefly pulses red, then fades to thief’s color over 800ms - Both animations run on UI thread via Reanimated worklets

Map pan/zoom: native MapLibre/Mapbox animations; don’t customize

5.3 Haptics

Event	Haptic
Button press	<code>ImpactFeedbackStyle.Light</code>
Capture start	<code>ImpactFeedbackStyle.Medium</code>
Capture success	<code>NotificationFeedbackType.Success</code>
Capture fail	<code>NotificationFeedbackType.Error</code>
Hex stolen (received)	<code>NotificationFeedbackType.Warning</code>
Level up	<code>NotificationFeedbackType.Success</code> + custom long pattern
Tab switch	<code>ImpactFeedbackStyle.Light</code> (subtle)

6. SCREEN SPECIFICATIONS

6.1 Splash & Loading

Purpose: App launch loading screen while auth state resolves.

Layout: - Background: pure `ink.50` - Center: Hexa logo (hex icon + wordmark, white), 120×40 - Below logo: `body-sm` text “Loading your city...” in `ink.600` - No spinner — keep it clean

Duration: 0.8s minimum to feel intentional, max 3s before forcing through.

On Android: match status bar color to `ink.50`.

6.2 Phone Entry

Purpose: Collect phone number for OTP authentication.

Route: `/(auth)/phone`

Layout (top to bottom):

1. **Status bar area** (safe area top)
2. **24px top spacing**
3. **Heading:** `display-sm`, “What’s your number?” (`ink.900`)
4. **Sub-heading:** `body-md`, “We’ll send you a 6-digit code.” (`ink.700`)
5. **40px spacing**
6. **Country code + Phone input row:**
 - 80px wide locked-disabled field showing `+91` `IN` in `ink.900` with flag emoji on left
 - Tap is disabled (no other country support in v1)
 - 12px gap right
 - Phone number input flex-1, placeholder “Enter mobile number”
 - Numeric keyboard, max length 10, auto-format with spaces every 5 digits (“98765 43210”)
7. **8px spacing**
8. **Helper text:** `body-sm`, `ink.600` — “Standard SMS rates may apply”
9. **Flex grow (push CTA to bottom)**
10. **Primary button:** “Send code” — full width, disabled until 10 digits entered
11. **16px spacing**
12. **Terms text:** `body-sm`, `ink.600`, centered, two lines
 - “By continuing, you agree to our Terms and Privacy Policy” with “Terms” and “Privacy Policy” as `saffron.600` tappable links
13. **Safe area bottom**

Validation rules: - Must be 10 digits - Must start with 6, 7, 8, or 9 (Indian mobile prefixes) - Show error inline: “Please enter a valid Indian mobile number”

On submit: - Button shows loading spinner - Call `send_otp` Edge Function - Success → navigate to OTP screen with phone as param - Failure → toast error “Couldn’t send code. Try again?”

6.3 OTP Verification

Purpose: Verify the 6-digit code sent via SMS.

Route: `/(auth)/otp?phone=+919876543210`

Layout:

1. **Header bar:** back arrow only, no title
2. **24px spacing**
3. **Heading:** `display-sm`, “Enter the code” (`ink.900`)
4. **Sub-heading:** `body-md`, “Sent to +91 98765 43210” with tappable “Change” link in `saffron.600` (returns to phone screen)
5. **40px spacing**
6. **OTP input:** 6-cell input as specified in §3.5
7. **24px spacing**
8. **Resend section:**
 - Resting state: `body-sm`, “Resend code in 30s” (`ink.600`)
 - After 30s countdown: tappable “Resend code” in `saffron.600`
 - Show 30s countdown that ticks down
 - Max 3 resends; after that show “Try again in 10 minutes”
9. **Flex grow**

10. **No primary button** — auto-submits when 6th digit entered

On 6 digits entered: - Auto-fire verification call - Show inline spinner replacing the OTP cells - Success: brief checkmark animation → navigate to Onboarding (if new user) or Map (if returning user with complete profile) - Failure: shake OTP cells (3 horizontal shakes, 50ms each), clear input, focus first cell, show error: “Wrong code. Try again.”

6.4 Onboarding Carousel

Purpose: Sell the core value prop to first-time users in 3 swipes.

Route: `/(auth)/onboarding`

Layout: Full-screen swipeable carousel, 3 pages.

Common across pages: - Page indicator dots at bottom, 24px above bottom button - “Skip” link top-right (only on pages 1-2), `body-sm`, `ink.700` - Primary button at bottom: “Next” on pages 1-2, “Let’s go” on page 3

Page 1 — The Game: - Visual: Animated illustration of a hex map with one hex flipping from gray to saffron (Lottie file, 4s loop) - Heading: `display-md`, “Walk the city. Capture it.” - Body: `body-lg`, `ink.700`, “Every neighbourhood in Bangalore is split into hex tiles. Stand on one for 20 seconds — it’s yours.”

Page 2 — The Rivalry: - Visual: Three avatars on a tiny map, two are “fighting” over a hex (Lottie) - Heading: `display-md`, “Your friends will steal them.” - Body: `body-lg`, “Defend your turf or lose it. Build streaks, climb your pincode leaderboard, earn medals for moments worth remembering.”

Page 3 — The Reward: - Visual: Hex card morphing into a coffee voucher - Heading: `display-md`, “Walk for real things.” - Body: `body-lg`, “Brand-sponsored vouchers from cafés you actually walk past. Coming soon to HSR, Indiranagar, Koramangala.”

Animation: Each page’s Lottie plays when it’s the active page, pauses when swiped away.

6.5 Profile Setup

Purpose: Get username, location, and play depth from new users.

Route: `/(auth)/profile-setup` (3 sub-steps, no back to previous step)

Step 1 of 3 — Identity: - Heading: `display-sm`, “Pick a username” - Sub: `body-md`, “This is what others will see when you capture or steal hexes.” - Input: text field with @ prefix (visual only), placeholder “rohit_walks_bangalore” - Validation: 3-20 chars, alphanumeric + underscore, unique check on blur - Inline status: green check if available, red “already taken” if not, gray spinner during check - Below: `body-sm`, `ink.600`, “You can change this later in Settings.” - Primary button: “Continue” (disabled until valid + available)

Step 2 of 3 — Location: - Heading: `display-sm`, “Where do you live?” - Sub: `body-md`, “We’ll show you the leaderboard for your neighbourhood first.” - Auto-detect button: “Use my current location” (calls GPS once, returns pincode) - Glass button style with location icon - OR divider - Manual: dropdown of Bangalore pincodes (filtered for 560001-560103) - Show neighbourhood names: “560102 — HSR Layout” - Primary button: “Continue”

Step 3 of 3 — Play depth: - Heading: `display-sm`, “How do you want to play?” - Sub: `body-md`, “We’ll tune the app to your style. Change anytime.” - Three option cards, full width, stacked with 12px gaps: - **Card A:** Icon (footprints), “Just walking” / “I want to explore and capture casually. Show me a clean map.” - **Card B:** Icon (flag), “Competing” / “I want leaderboards, streaks, and friend rivalries.” - **Card C:** Icon (crown), “Conquering” / “Give me everything — clans, medals, paths, the deep end.” - Tap to select (saffron border + saffron icon when selected) - Primary button: “Start playing”

On step 3 submit: - Write `users` row with all collected fields - Navigate to Permission Requests

6.6 Permission Requests

Purpose: Progressive permission request for location, notifications, contacts.

Route: `/(auth)/permissions` — sequential, not skippable for location

Pattern for each: Full-screen vertical layout 1. Custom illustration (96px icon in `saffron.600`) 2. Heading explaining WHY 3. Body explaining HOW it’s used 4. “Continue” primary button 5. “Maybe later” ghost button (only for notifications + contacts, NOT for location)

Sub-screen 1 — Location (foreground): - Icon: Location pin filled - Heading: “Hexa needs your location” - Body: “To know which

hexes you're in. We only check while you're using the app." - Tap "Continue" → triggers OS permission dialog - If denied: show explainer screen ("Hexa can't work without location. Open Settings?") with "Open settings" button

Sub-screen 2 — Notifications: - Icon: Bell - Heading: "Get notified when it matters" - Body: "We'll ping you when someone steals your hex, your streak is at risk, or you level up. Nothing else." - Tap "Continue" → OS permission

Sub-screen 3 — Background location (asked AFTER user has captured their first hex, not during onboarding): - Icon: Pin with arrow loop - Heading: "Track captures in the background" - Body: "So we can ping you when someone walks into your hex while you're not looking. Battery impact under 5%/hour, promise." - Permission dialog has 2-step on iOS — first "Always allow" needs to be enabled in Settings; show inline instructions

Sub-screen 4 — Contacts (post-MVP, Phase 7): - Icon: People - Heading: "Find your friends already on Hexa" - Body: "We only check phone numbers, never your contacts' names, emails, or anything else."

After all required permissions: navigate to Map.

6.7 Map / Home

Purpose: The core screen. Live map of Bangalore with hex overlay, capture entry point, all primary game actions.

Route: `/ (tabs)/index` — default tab

Layout (z-stacked):

Bottom layer: MapLibre/Mapbox map, full screen - Style: light map (use `mapbox://styles/mapbox/light-v11` or MapTiler "Streets v2 light") - Initial centre: user's last known location, or HSR centroid (12.9116, 77.6473) as fallback - Initial zoom: 16 (street level, ~150m visible) - Hex overlay: render polygons for hexes in viewport (max ~500)

Hex polygon styling: - Unowned: `map.neutral` fill, 1px stroke `rgba(0,0,0,0.15)` - Owned by current user: `saffron.600` at 0.45 opacity, 1.5px stroke `saffron.700` - Owned by other user: that user's `playerColors` at 0.35 opacity, 1px stroke at full color - Fresh paint (just captured): same as owned, plus animated shimmer (subtle gradient pulse, 2s loop) - Currently capturing (you, in dwell): pulsing saffron glow at the outline, 1Hz

User location marker: - Pulsing dot, 16px, `saffron.600` with white border - Accuracy circle: faint saffron at 10% opacity, radius = GPS accuracy in metres - Direction indicator: when heading available, show a 30° "cone" pointing forward

Top overlay (status bar area + below): - Floating left: avatar (40×40, glass background with backdrop blur) - Tap → opens Profile tab - Floating center: current point counter - Glass pill, 120×36 - Inside: hex icon + tabular number `current_round_points` - Tap → opens detailed stats sheet - Floating right: streak indicator - Glass pill, 60×36 - Inside: flame icon (Lottie) + tabular number - Tap → opens streak detail sheet

Bottom overlay (above tab bar): - Context-aware floating card OR FAB

Context Card variant 1 — Outside any hex: - Glass card, 16px margin all sides, padding 16 - Left: small map dot icon - Center: "You're not in a hex. Walk to a hex to capture it." (`body-sm`) - Right: arrow icon pointing to nearest unowned hex (tap → animates camera to nearest hex)

Context Card variant 2 — Inside an unowned hex: - Glass card, more prominent (saffron tint to the glass — `rgba(255, 111, 0, 0.18)`) + blur - Heading: "Capture this hex" (`heading-sm`) - Subtitle: "+100 IP available" (`body-sm`) - Right: large saffron "Capture" button (pill, ~120 wide) - On tap: opens Capture Dwell overlay (\$6.9)

Context Card variant 3 — Inside your own hex: - Glass card, neutral - Heading: "Your hex" + small "(captured 2h ago)" subtitle - Subtitle: small icons for fresh-paint timer if active, fortified status, etc. - Right: ghost "Details" button → opens Hex Detail sheet

Context Card variant 4 — Inside an enemy hex: - Glass card, danger tint (`rgba(255, 61, 0, 0.18)`) - Heading: "Held by @priya_walks" - Subtitle: avatar + "Steal: +130 IP" (1.3x for steal) - Right: saffron "Steal" button → opens Capture Dwell - If fresh paint: show "🛡️ Protected for 24m" instead of steal button

Context Card variant 5 — Block cooldown: - Glass card, neutral - Heading: "Cooling down" - Subtitle: "Available in 12m 34s" (live countdown) - No button

Other floating controls: - Bottom right (above context card): two stacked glass FABs - Top FAB: "Recenter" icon (48×48, glass, target/crosshair icon) — animates camera back to user location - Bottom FAB: "Layers" icon (48×48, glass, layers icon) — opens layer toggles sheet (hex info, friends only, etc. — post-MVP, hidden in v1)

Real-time updates: - When a hex you own gets stolen: top banner slides in (see §3.7 toast) - When your accuracy degrades: small inline pill at top "Improve GPS signal — accuracy 38m" - When you enter Travel Mode (>10km/h sustained): banner "🚗 Travel mode on — saving battery"

Pan behavior: - Free pan in all directions - Snap-to-center button (recenter FAB) - Compass: doesn't rotate (north always up) — simpler for non-power-users

Pinch zoom range: - Min zoom: 13 (neighbourhood overview) - Max zoom: 19 (single hex detail) - Default: 16

6.8 Hex Detail Sheet

Purpose: Show details about a tapped hex.

Trigger: Tap on any hex on the map (not your current hex's context card).

Type: Bottom sheet (§3.6), snap to 50% height initially.

Layout (top to bottom):

1. **Drag handle**
2. **Header row:**
 - Left: small hex icon in owner's color (or neutral)
 - Center: "Hex #4A2B" (6-char short identifier derived from h3_index)
 - Right: close X button
3. **Status badge:** [Unclaimed] or [Held by @username] or [Fresh Paint 18m left]
4. **Stats row** (3 columns, equal width):
 - **IP:** big number (`heading-lg`) — e.g., 100
 - **PPH:** big number — e.g., 3/hr
 - **Rarity:** stars or label — "Common" / "Rare" / "Crown Hex"
5. **Map preview:** small 1:1 inline map showing just this hex centered, 160×160, rounded corners
6. **Capture/Steal CTA** (only if you're inside this hex):
 - Primary button: "Capture this hex" or "Steal this hex"
 - Disabled with reason if can't: "Improve GPS signal" / "Block cooldown 12m" / "Fresh paint 18m"
7. **History section** (if any):
 - Heading: "Recent activity" (`label-md` , `ink.700`)
 - List of last 5 captures: avatar + "@username captured" + relative time
 - Tap row → opens that user's profile
8. **Power Zone info** (post-MVP, if applicable):
 - Saffron tinted card: "☕ Sponsored by Third Wave Coffee — 3× PPH active"

6.9 Capture Dwell Overlay

Purpose: The 20-second capture experience. The single most important screen for game feel.

Trigger: Tap "Capture" or "Steal" from map context card or hex detail.

Type: Full-screen modal, fade in over 250ms.

Layout:

Background: - Map continues to render behind, but with a `rgba(10,10,10,0.7)` overlay - The hex being captured stays visible and highlighted (saffron border, pulsing glow) - Everything outside the hex dims further to `rgba(10,10,10,0.85)`

Foreground content (vertical center):

1. **Top status row** (safe area top + 16):
 - Left: close X (24, white, glass background)
 - Right: GPS accuracy pill — "📶 ±18m" — color shifts:
 - Green when accuracy < 25m
 - Amber when 25-40m
 - Red when > 40m (pauses timer)
2. **Center (vertical middle):**
 - **Circular dwell timer:** 240×240 circle
 - Outer ring: 8px stroke, `ink.400` background track
 - Progress fill: saffron gradient, animates clockwise from 12 o'clock
 - Glow effect: outer 16px ambient glow in saffron, intensity pulses
 - Center content (stacked):
 - Big number: remaining seconds (e.g., "13"), `display-xl` (64pt), saffron
 - Label: "seconds" (`body-sm` , `ink.700`)
3. **Below timer (32px gap):**

- **Hex name and IP value:**
 - “Hex #4A2B” (`heading-md`)
 - “+100 IP” (`body-md` , `saffron.600`)
- 4. **Below that (24px gap):**
 - **Status checks** (live, change colors as conditions are met or fail):
 - Three small rows with check icons:
 - “✓ Inside the hex” (green when in, red “Leave hex to abort” if not)
 - “✓ GPS signal good” (green/amber/red based on accuracy)
 - “✓ Walking pace” (green when speed < 10 km/h, amber if > 10 km/h with “Slow down” message)
 - Use 16px icons; text in `body-sm`
- 5. **Bottom (safe area bottom + 24):**
 - **Cancel button:** ghost button, “Cancel capture”, `body-md` , `ink.600`
 - Tap → returns to map, no points awarded

Behavior: - Timer ticks down once per second (use Reanimated for smooth interpolation between ticks) - If user exits hex: progress ring jolts (shake animation), timer resets to 20, status flips red - If GPS degrades: timer pauses (not resets), accuracy pill turns amber/red - If speed > 10 km/h sustained 3s: timer pauses, “Walking pace” status flips red - At timer reaches 0 + all checks green: transition to Capture Success - At timer reaches 0 + any check red: stay paused, show why - Background: a faint heartbeat pulse on the entire view (very subtle, 0.5Hz, opacity ±0.02)

Sounds (optional, default off): - Soft tick at each second (very subtle) - Triumphant chime on completion

6.10 Capture Success

Purpose: The dopamine hit. Make the capture feel like winning.

Trigger: Successful capture validation from server.

Type: Full-screen, fade + scale in, 250ms.

Layout (vertical center):

Background: - Solid saffron flash on entry (250ms), then settles to dark gradient: `saffron.900` at top → `ink.50` at bottom - 8 hex-shaped confetti particles burst from center, falling at varied speeds, fade out by 1.5s

Center stack:

1. **Hex visualization:** Large hex icon (filled saffron, 160×160) with glow ring — bounces in with overshoot
2. **24px gap**
3. **“+150 IP”** — `display-xl` (64pt), pure white, with count-up animation from 0
4. **8px gap**
5. **Capture type label:** “STOLEN FROM @priya_walks” or “NEW CAPTURE” or “REVISITED”, in `label-sm` , `ink.700` , uppercase, tracking 1px
6. **24px gap**
7. **Secondary stats row** (3 cells):
 - “Streak: 🔥 13” — flame icon
 - “Today: 7 hexes”
 - “Rank: #14 in HSR”
 - Each in small glass capsule, `body-sm`

Bottom (safe area bottom + 24):

8. **Primary button:** “Share this capture” — opens share card
9. **Ghost button:** “Continue capturing” — dismisses back to map (default action on tap-anywhere-else)

Auto-dismiss: After 5 seconds if no interaction, fade back to map.

Variants:

- **Level up overlay:** If this capture pushed you to a new level, layer a second celebration on top after the IP count finishes — “LEVEL UP! → L3 Patroller”, with a small description of new perks, slide in from below.
- **Medal earned overlay:** Similar, slide in a medal card. If multiple medals, queue them.
- **First capture ever:** Special copy, “Welcome to the game. You captured your first hex.” with a more emphatic celebration.

6.11 Profile / Stats

Purpose: Your home base. Stats, medals, level progress, settings access.

Route: `/((tabs)/profile`

Layout (scrollable):

1. **Header bar** with settings icon top-right (gear)
2. **24px spacing**
3. **Hero card** (full-width, padding 24):
 - Avatar (96px) centered
 - 12px gap
 - Display name (`heading-lg`), centered
 - 4px gap
 - `@username` (`body-md` , `ink.700`), centered
 - 16px gap
 - Level badge pill: e.g., “L3 Patroller” with progress to next level inline
 - 8px gap
 - Linear progress bar to next level (visible XP and goal, e.g., “1,840 / 2,500 XP”)
 - 16px gap
 - **Stat row** (use Headline Metric Row §3.14, 3 cells): “🔥 Streak 13” · “Hexes 47” · “Rank #14 HSR”
4. **Next Unlock row** (full-width card, saffron-tinted):
 - Background: `ink.200` with `1px solid rgba(255, 111, 0, 0.25)` border
 - Padding: 16
 - Layout: icon (left, 32px saffron lock-open icon) + text block (middle) + chevron (right)
 - Text block stacked:
 - **Label:** “NEXT UNLOCK” (`label-sm` , `saffron.600` , uppercase, tracking 1px)
 - **Title:** “Level 4 — Clan Creation” (`heading-sm` , `ink.900`)
 - **Progress:** “660 XP to go” (`body-sm` , `ink.700`)
 - Tap → opens a sheet listing all upcoming level unlocks
5. **Section: XP Challenges** (horizontal scroll, drives onboarding + retention)
 - Heading: `heading-md` , “Earn XP”
 - Subhead: `body-sm` , `ink.700` , “Quick wins to level up faster”
 - 12px gap
 - Horizontal-scrolling row of challenge cards (snap-to-card)
 - Each card: 140px wide, 160px tall, 12px gap between cards
 - Background: `ink.200` , border radius `md` (12), padding 16
 - Top: icon (32px, saffron) representing the task
 - 8px gap
 - Title (`label-md` , `ink.900` , 2 lines max), e.g., “Add a profile photo”
 - Flex grow
 - Bottom: XP reward badge (use Badge §3.4, `saffron` tone), e.g., “+10 XP”
 - Launch challenges (8 cards):
 1. “Add a profile photo” — +10 XP (one-time)
 2. “Set your hex color” — +10 XP (one-time)
 3. “Capture 3 hexes today” — +30 XP (daily)
 4. “Walk 6,000 steps today” — +20 XP (daily, via Health Connect/HealthKit)
 5. “Invite a friend” — +50 XP per accepted friend (capped 3/week)
 6. “Enter referral code” — +20 XP (one-time)
 7. “Capture a Crown hex” — +100 XP (one-time)
 8. “Hold a hex for 7 days” — +75 XP (one-time)
 - Completed challenge: card collapses to half-height with `success` check; auto-removes from scroll after 24h
6. **Section: This month**
 - Heading `heading-md` , “This month”
 - Card with 4 stats grid 2×2:
 - Captures: 86
 - Round points: 4,210
 - Stolen from you: 12
 - Stolen by you: 9
7. **Section: Medals**
 - Heading with link “View all” right

- Horizontal scroll of earned medal icons (64px each, with tier badge)
 - Empty state if none: “No medals yet. Capture your first hex to start.”
8. **Section: Recent activity**
- Last 10 captures, list view
 - Each row: small hex icon + “Captured hex in HSR Sector 7” + relative time + “+100 IP” right
9. **Bottom: Settings link card** (full width)
- Settings icon + “Settings” + chevron
 - Tap → Settings screen

Note on XP vs Round Points: XP is the *progression* currency (drives level), Round Points is the *competitive* currency (drives monthly leaderboards). They earn in parallel but serve different loops. Captures earn both; XP Challenges earn only XP.

6.12 Leaderboard

Purpose: Show ranks. Most-viewed screen after Map.

Route: `/(tabs)/leaderboard`

Layout:

1. **Header bar:** title “Leaderboard”
2. **Primary sub-toggle** (use §3.11, full width): “Pincode” (default) | “Bangalore” | “Friends”
 - **Phase 11+:** A 4th option “Clans” appears once user reaches L3 (or already in a clan). When selected, list switches to ranking clans rather than individual players.
3. **Secondary sub-toggle** (use §3.11, slightly smaller, content-width, centered): “Week” | “Month” (default) | “All-time”
4. **Sub-header:** Shows scope context, e.g., “HSR Layout · This month” — derived from both toggles
5. **Your rank card** (sticky-ish at top, only if you’re not in top 3):
 - Avatar + your name + your points + your rank
 - Saffron border to highlight as “you”
 - Tap → no-op (you’re already here)
6. **Leaderboard list** (scrollable):
 - **Top 3:** Larger cards with crown/medal icons (gold/silver/bronze)
 - **Rest:** Standard list rows
 - Each row: rank number (large) + avatar + display name + level badge + points (right)
 - Tap row → opens that user’s public profile

Behavior notes: - Changing either toggle refetches the leaderboard query - Show skeleton loader for ~600ms during refetch - “All-time” view is gated for L2+ (use Feature gate card §3.13 if L1 user taps it) - “Friends” empty state: “Add friends to start a rivalry” with primary “Find friends” button

Empty states: - Friends empty: “Add friends to compete. → Find friends” button - Pincode empty: shouldn’t happen, but fallback: “No players in this pincode yet.”

Pull-to-refresh: Native pull-down to refresh, saffron spinner.

6.13 Friends

Purpose: Add friends, see friend leaderboard, send/receive friend requests.

Route: `/(tabs)/friends`

Layout:

1. **Header bar:** title “Friends” + add-friend icon top-right (person+)
2. **Sticky search bar:** “Search by username” — when focused, opens search results
3. **Sub-sections:**
 - **Pending requests** (if any): list of incoming, with Accept/Decline buttons
 - **Your friends** (count): list of friends, sorted by current round points DESC
4. **List row format:**
 - Avatar
 - Display name + @username
 - Level badge
 - Right: small “Steal them” tappable that opens map centered on a hex they own (cheeky CTA)

Empty state: - Illustration of two avatars connecting - “No friends yet” - “Add friends to see their walks and steal their hexes.” - Primary: “Find friends” → opens add-friend modal with username search and contacts sync option

6.14 Medals Gallery

Purpose: Browse all medals (earned and unearned).

Route: Modal from Profile screen

Layout:

1. **Header bar:** “Medals” + close X
2. **Tabs:** “Earned (8)” | “All (47)”
3. **Grid:** 3 columns, square cards
 - Each card: medal icon (large), name, tier badge
 - Earned: full color
 - Unearned: greyscale + lock icon
 - Tap card → medal detail modal

Medal detail modal: - Large medal icon - Name (**heading-lg**) - Description (“Capture between midnight and 5 AM”) - Earned date if earned, or progress bar if not (e.g., “12/25 captures”) - LP reward - Number of players who have this (rarity)

6.15 Settings

Purpose: Account, preferences, integrations, support, account actions.

Route: Modal from Profile screen (gear icon in header)

Layout:

Standard iOS-style grouped list. Each row: label left, current value right (if applicable), chevron rightmost. Section headers **label-sm** uppercase in **ink.600** with 1px tracking.

Group 1: Account - Edit profile (avatar, display name, date of birth, gender — opens dedicated edit screen) - Username (read-only with tappable “Change” if first change unused) - Phone number (read-only with “Update” link → re-verification flow) - Home pincode (with neighbourhood label)

Group 2: Notifications - Hex stolen alerts (toggle, default ON) - Streak nudges (toggle, default ON) - Daily morning summary (toggle, default ON) - Friend activity (toggle, default OFF) - Level up + medals (toggle, default ON) - Quiet hours (toggle + time range picker, default 10pm–7am IST)

Group 3: Privacy - Ghost Mode (toggle — hides you from public leaderboards) - Hide home hex (toggle — never show your last-captured hex to others) - Contact sync (toggle — find friends from phone book) - Profile visibility (Everyone / Friends only / Just me) — radio - Show in feed (toggle, post-MVP) - Block list (link → manage blocked users)

Group 4: Appearance & Play - Hex color (color picker, 8 options — opens swatch grid) - Map style (Light / Dark — Dark post-MVP) - Language (English / Hindi / Kannada / Tamil — Hindi post-MVP, rest later) - Units (Kilometers / Miles — kilometers default for India) - Battery saver (toggle — reduces GPS polling frequency when stationary) - Location precision (High / Balanced) — explainer text below: “High uses more battery but improves capture accuracy”

Group 5: Pro & Vouchers (*post-MVP, but include the row from day 1*) - Hexa Pro subscription (status: “Free” or “Pro until DD MMM”) → opens upgrade screen - Voucher wallet (count of unredeemed vouchers, e.g., “3 vouchers available”) → Bazaar - Redemption history (link → list of past redemptions) - Restore purchases (link — for users who reinstalled)

Group 6: Referrals - Use a referral code (link → Referral Code Entry screen \$6.20) - Your referral code (display the code, e.g., “HEXA-A7B3K9”, with tap-to-copy and Share button) - Referrals earned (count, e.g., “3 friends joined — +150 XP”)

Group 7: Integrations (*post-MVP, but include the row from day 1*) - Apple Health (toggle + connect button) - Google Fit / Health Connect (toggle + connect button) - Strava (Export captures as Strava activities, toggle) - Apple Watch / Wear OS (link → companion app info)

Group 8: About & Support - Help & FAQ (in-app web view) - Contact support (opens WhatsApp with prefilled “Hexa support · User ID: [uuid]”) - What’s new (changelog of recent app updates) - Terms of service (web view) - Privacy policy (web view) - Open source licenses (web view) - App version + build number (read-only, e.g., “v1.0.3 · build 142”)

Group 9: Danger zone (*visually muted, red text on destructive items*) - Pause my account (consumes vacation token, freezes streak and PPH for 7 days) - Sign out (confirm dialog) - Delete account (multi-step confirmation: warning → re-enter phone OTP →

confirm → 14-day soft delete window)

6.16 Capture Share Card

Purpose: Auto-generated image users share to WhatsApp/Instagram. Critical viral mechanic.

Trigger: “Share this capture” button on Capture Success screen, or “Share” from end-of-day summary.

Output: 1080×1080 PNG image, generated on-device.

Visual layout (1080×1080):

- Background: vertical gradient `saffron.700` (top) → `ink.50` (bottom)
- Subtle hex pattern texture at 5% opacity overlay
- Top section (top 200px):
 - Hexa wordmark logo, white, 32pt, left aligned with 64px margin
 - Date right aligned: “28 May 2026”
- Center section (next 600px):
 - Large user avatar (200×200) circular with 4px white border, centered
 - Below avatar (32px gap): display name in white, 48pt bold, centered
 - Below name: `@username` in `saffron.300`, 24pt
 - Below (40px gap): big stat in white, 96pt bold, centered, with label below:
 - Single capture share: “Captured Hex #4A2B” big + “in HSR Sector 7” subtitle
 - Daily summary share: “7 hexes today” big + “in HSR Sector 7” subtitle
 - Streak share: “🔥 30-day streak” big + “Don’t break the chain” subtitle
- Bottom section (bottom 280px):
 - Stat row, 3 cells equal width:
 - Streak | Held hexes | Rank
 - Each cell: number top (48pt bold white) + label below (16pt `saffron.200`)
 - 32px gap
 - Bottom bar:
 - Left: QR code (120×120, white on transparent)
 - Right: “Download Hexa on iOS + Android” two-line text
 - Bottom 16: “hexa.app” centered, 18pt `saffron.200`

Sharing implementation: - Use `react-native-view-shot` to capture a hidden component - Then `expo-sharing` to launch share sheet - Default share message text: “Just captured a hex in HSR on Hexa 🏡 Beat me → hexa.app”

6.17 Walk Session — Active Tracking

(Phase 10 — ships when Paths feature lands)

Purpose: A “session” is an explicit walk a user starts when going for a planned outing (e.g., attempting a Path, joining a clan walk event, going on a curated route). Captures still happen organically — sessions just wrap the walk in a recorded artifact with stats and a shareable summary.

Trigger: Tap “Start a walk” from the Map context card (visible when not currently inside a hex) OR from a Path detail sheet.

Route: `/walk/active` — presented as full-screen modal over the Map tab.

Layout:

Map area (top 60% of screen): - Full-bleed map continuing from the home Map - User’s live route traced in saffron polyline, 4px stroke, 0.8 opacity - Hexes captured during this session glow with a brief 1.5s saffron pulse animation as they’re added - Standard hex overlay continues to render in background - Top-left: small back chevron with confirm “End walk? Hold to finish” (uses §3.12) - Top-right: pause icon (glass button) — pauses the session timer + GPS recording

Stats panel (bottom 40%): - Background: `ink.100` (slightly elevated above app bg) - Border radius: `xl` (24) top corners only - Padding: 24 horizontal, 20 vertical - **Title row:** “Walking · HSR Layout” (`heading-md`, `ink.900`) with live duration ticker (`mono-md`, `saffron.600`) right-aligned - **Headline metric row** (use §3.14, 4 cells): - **Distance:** big number km, e.g., “1.42 km” - **Duration:** mm:ss, e.g., “12:34” - **Hexes:** count captured this session, e.g., “5” - **Avg pace:** min/km, e.g., “11:30” - **GPS quality indicator** (small row below metrics): - Icon: 📶 (16px) + “GPS ±18m” + bar indicator (3 bars colored by quality) - “Travel Mode active” warning if speed sustained >10 km/h - **Action row** (bottom of panel): - Left: “Resume” button (ghost, only shown if paused) - Right: Hold-to-confirm button §3.12 — “Hold to finish”

Behavior: - Session timer runs continuously while not paused - GPS samples every 2 seconds (3 seconds in battery-saver mode) - All hex captures during the session are tagged with `session_id` for the summary - If user backgrounds the app: foreground service notification on Android shows “Walking · 1.42 km · 12:34”; iOS uses background location with appropriate “Walking” activity type - If user kills the app or device dies: session auto-ends after 15 minutes of no GPS pings, partial summary saved - If GPS accuracy degrades below 40m for 60 seconds: banner “Weak GPS — pausing distance tracking” (captures still attempted)

Pause state: - Session timer freezes - Map dims slightly (overlay `rgba(0,0,0,0.2)`) - “PAUSED” pill in saffron at top center of map - “Resume” button replaces “Hold to finish” until tapped

6.18 Walk Session — Finish Confirmation

(Phase 10)

Purpose: Anti-misfire guard before ending a session. Prevents accidental finishes from a stray tap mid-walk.

Trigger: Hold-to-confirm “Hold to finish” completes on §6.17.

Type: Bottom sheet modal, snap to ~50% height. Map continues to render dimmed behind.

Layout:

1. **Drag handle**
 2. **16px spacing**
 3. **Title:** “Finish your walk?” (`heading-lg` , `ink.900` , centered)
 4. **8px spacing**
 5. **Subtitle:** “You’ll log this session and add it to your history.” (`body-md` , `ink.700` , centered)
 6. **24px spacing**
 7. **Mini-stat preview row** (use §3.14, 3 cells, smaller scale — `display-sm`):
 - Distance · Duration · Hexes
 8. **24px spacing**
 9. **Primary button:** “Yes, finish walk” — opens Log Walk screen §6.19
 10. **12px spacing**
 11. **Tertiary destructive link:** “Discard this walk” (`label-md` , `danger` , centered)
 - Tap → secondary confirmation: “Discard? You won’t get the IP from this walk’s hex captures.”
 - Note: hexes captured during the session REMAIN captured even if walk is discarded — only the session record is dropped
 12. **Cancel area:** tap on backdrop or drag down to close → returns to Active Tracking
-

6.19 Walk Session — Log Walk

(Phase 10)

Purpose: Post-walk summary + publish. User reviews their walk, adds context, decides what to share.

Trigger: “Yes, finish walk” from §6.18.

Route: `/walk/log/:sessionId`

Layout (scrollable):

1. **Header bar:** back arrow + title “Walk summary” + right-side “Log walk” primary button (sticky)
2. **24px spacing**
3. **Editable title input:**
 - Default: “Morning walk · HSR” (auto-generated from time of day + neighbourhood)
 - Inline text input (no underline visible until tapped, then `saffron.600` underline)
 - Pencil icon right to indicate it’s editable
4. **16px spacing**
5. **Headline metric row** (use §3.14, 4 cells, `display-md`):
 - Distance · Duration · Hexes captured · IP gained
6. **16px spacing**
7. **Map snapshot:** square 1:1 mini-map showing the walk’s route + captured hexes, rounded `lg` corners. Tap → opens full-screen route view.
8. **24px spacing**
9. **“How was your walk?” section:**
 - Heading `heading-sm` , “How was your walk?”

- Effort slider: 5-point scale, “Easy” (left) ↔ “Difficult” (right), saffron track, draggable thumb
- Below slider: emoji feedback updates as thumb moves (😊 → 😊 → 😊 → 😊 → 😊)
- Selected value persists; default to “Just right” (middle)

10. **20px spacing**

11. **Notes field:**

- Label: “Add a note (optional)”
- Multiline text input, 3 visible rows, max 300 characters
- Placeholder: “Sankey Tank loop on a cloudy morning...”
- Char counter bottom-right when focused

12. **24px spacing**

13. **Photo attachments** (*post-MVP placeholder, show disabled in v1*):

- “Add photos” button (ghost, disabled with “Coming soon” badge)

14. **24px spacing**

15. **Visibility section:**

- Heading `label-md`, “Share this walk”
- Toggle 1: “Show on Friends feed” (default OFF in v1; toggles on with confirmation if Ghost Mode is OFF)
- Toggle 2: “Add captures to my territory map” (default ON; this writes the session’s captures to the public map history)
- If both off: small explainer “This walk stays private to you.”

16. **40px spacing**

17. **Primary button** (already in sticky header, but also at bottom): “Log walk”

18. **Ghost button:** “Discard”

On “Log walk” submit: - Session record saved to DB - Brief saffron success animation (similar to capture success but smaller) - Navigates back to Map with bottom toast: “Walk logged. +N IP from N captures.” - If “Add captures to my territory map” was OFF: hexes still count for the user’s points but don’t appear in public capture history feed

6.20 Referral Code Entry

Purpose: Redeem an invite/referral code received from a friend. Earns the entering user XP and triggers an XP reward for the inviting user when the entrant hits Level 2.

Trigger: “Use a referral code” from Settings §6.15 Group 6, or from the XP Challenges card in Profile §6.11.

Route: `/referral/redeem` — presented as a modal sheet from Settings, or full-screen from Profile.

Layout (vertical center, modal style):

1. **Header bar:** close X top-right + title “Referral code”
2. **40px spacing**
3. **Hero icon:** 64px gift icon in `saffron.600`, centered
4. **20px spacing**
5. **Heading:** “Got a code from a friend?” (`heading-lg`, `ink.900`, centered)
6. **8px spacing**
7. **Subtitle:** “Enter their referral code to get +20 XP. They’ll get bonus XP too when you hit Level 2.” (`body-md`, `ink.700`, centered, max 320px wide)
8. **40px spacing**
9. **Code input field:**
 - Style similar to OTP cells but a single field
 - Format: 6 alphanumeric chars, auto-uppercase, monospaced display
 - Example shown as placeholder: “HEXA-XXXX” (the “HEXA-” prefix is implicit and not entered)
 - Width: 240px, height 56, centered
 - On entry, validates locally: 6 chars, alphanumeric only
 - Auto-removes hyphens, spaces, lowercase normalizes
10. **8px spacing**
11. **Inline status helper text** (`body-sm`, centered):
 - Resting: “ ” (empty)
 - Invalid format: “Codes are 6 characters.” (in `danger`)
 - Validating: spinner + “Checking...” (in `ink.700`)
 - Found: “Code from @friend_username ✓” (in `success`)
 - Already used: “You’ve already used a code.” (in `danger`)
 - Not found: “Code not found. Double-check?” (in `danger`)

12. **Flex grow**
13. **Primary button:** “Unlock +20 XP” — disabled until valid code entered, full width
14. **16px spacing**
15. **Below button — secondary section:**
 - Divider line `ink.400` width 80px, centered
 - 16px spacing
 - Label: “YOUR REFERRAL CODE” (`label-sm` , `ink.600` , uppercase, centered)
 - 8px spacing
 - Big code display in monospace: “HEXA-A7B3K9” (`heading-lg` , `saffron.600` , centered)
 - 8px spacing
 - Two ghost buttons inline: “Copy” + “Share” (each with leading icon)
 - 8px spacing
 - Stat text: “3 friends joined · +60 XP earned” (`body-sm` , `ink.700` , centered)

Constraints: - One referral code can be redeemed per user account (lifetime) - Codes are 6 chars, uppercase alphanumeric (excludes O, 0, I, 1 to prevent ambiguity) - Each user’s code is auto-generated at signup and never changes - Inviting user gets +50 XP when entrant reaches Level 2 (capped 10 referrals per month per inviter to prevent abuse)

6.21 Clan Hub / My Clan

(Phase 11 — Month 4)

Purpose: Home screen for users who belong to a clan. Shows clan standing, collective territory, member activity, and history. Drives the apartment/college/tech-park identity loop that makes Hexa stick beyond solo play.

Trigger: Tapping “Clan” row in Profile (when user is in a clan) OR tapping a clan tag prefix from any leaderboard.

Route: `/clan` (your clan) or `/clan/[clanId]` (any clan, shows \$6.24 instead)

Layout (scrollable):

1. **Header bar:** clan tag prefix (e.g., `[HSR7]`) + clan name + right-side gear icon (Leader/Officer only → opens \$6.25 Members & Roles)
2. **Hero card** (full-width, padding 24, clan-themed):
 - Background: subtle gradient from clan color at 12% opacity (top) to `ink.100` (bottom)
 - **Clan badge** (96px, centered): square with rounded corners (`lg`), shows uploaded logo or initial-letter fallback with clan color
 - **8px gap**
 - **Clan name** (`heading-lg` , `ink.900`), centered
 - **Tag prefix** (`label-md` , clan color, monospace) below name, e.g., `[HSR7]`
 - **Verified badge** (small saffron checkmark + “Verified”) if applicable
 - **8px gap**
 - **Meta row** (`body-sm` , `ink.700` , centered): “127 members · Apartment clan · Founded 12 Apr”
3. **Headline metric row** (use §3.14, 4 cells):
 - **Territory** — total hexes held by clan members combined
 - **Members** — active count (logged in within 30 days)
 - **This month** — total clan RP earned this season
 - **Rank** — clan’s position on the inter-clan board, e.g., “#3 in 560102”
4. **Primary sub-toggle** (use §3.11): “Leaderboard” (default) · “Territories” · “History”

Leaderboard sub-tab content: - **Secondary sub-toggle:** “Inter-clan” (default) · “Members” - **Inter-clan view:** - Region toggle (use §3.11): “Pincode” · “Bangalore” · “India” - Ranked list of clans: rank · badge · name · territory · this-month RP - Your clan row highlighted with saffron border - Tap row → opens \$6.24 Clan Detail - **Members view:** - Ranked list of your clan’s members: rank · avatar · username · role badge · contribution (RP earned for clan this month) - Tap row → opens member’s public profile

Territories sub-tab content: - Full-width map (60% screen height) showing all hexes owned by clan members, color-coded by individual member (use member’s personal hex color, with clan color as outline) - Below map: small legend showing top 5 member contributors - Sort sub-toggle: “By date captured” · “By contributor” · “By area”

History sub-tab content: - Area chart: clan total hexes over time (4 weeks default, toggle for 12 weeks or all-time) - Below chart: timeline of clan-level events (new member joined, member captured a Crown hex, leadership transferred, clan ranked up) - Each event row: icon + descriptive text + timestamp

Empty states: - Solo clan (just you as founder, 1 member): card with “Your clan needs members. Share your clan link to invite friends.” + “Copy invite link” button + “Share on WhatsApp” button

6.22 Clan Discovery & Browse

(Phase 11)

Purpose: Browse all public clans, find one to join, or start your own.

Trigger: Tap “Find a clan” from Profile, or from Leaderboard’s Clans tab when user has no clan.

Route: `/clans/discover`

Layout:

1. **Header bar:** title “Find a Clan” + back arrow
2. **Sticky search bar:** placeholder “Search clan name or tag” with magnifier icon left, clear-X right when text present
3. **Filter chips row** (horizontal scroll, just below search):
 - Chips: All · Verified only · Apartment · College · Tech park · Custom
 - Active chip: saffron pill background, white text
 - Inactive: `ink.200` background, `ink.700` text
4. **Sort sub-toggle** (use §3.11, content-width centered): “Most members” · “Most territory” · “Newest”
5. **Sub-header:** “Showing 38 clans in 560102” or “Showing 412 clans in Bangalore” — derived from filters
6. **Clan list** (scrollable, 1 column):
 - Each card: padding 16, `ink.200` background, border radius `md`, 12px gap between cards
 - **Layout:** badge (48px) left, content middle (clan name + tag + meta), arrow chevron right
 - **Content stack:**
 - Row 1: clan name (`heading-sm`) + verified checkmark inline if applicable
 - Row 2: tag prefix (monospace, clan color) + type label + “· 127 members”
 - Row 3: “1,840 km² territory · #3 in pincode” (`body-sm` , `ink.700`)
 - Tap card → §6.24 Clan Detail
7. **Floating Create FAB** (bottom-right, 56×56):
 - L3+ users: saffron filled circle with `+` icon, tap → §6.23 Clan Creation
 - L1-L2 users: grey filled circle with lock icon, tap → shows Feature Gate §3.13 explaining “Reach Level 3 to create a clan”

Empty states: - No clans matching filter: “No clans found. Try different filters?” with “Reset filters” button - No clans at all in pincode (very early launch): “Be the first. Create a clan in [neighbourhood].”

6.23 Clan Creation Form

(Phase 11 — gated to L3+)

Purpose: Create a new clan. Multi-step to keep each decision focused.

Trigger: “+” FAB on §6.22 Discovery (L3+ only).

Route: `/clans/create` (4 sub-steps, no back to previous step after step 1)

Step 1 of 4 — Pick a type: - Heading (`display-sm`): “What kind of clan?” - Sub (`body-md` , `ink.700`): “This affects how members verify they belong.” - 4 type cards, 2×2 grid, equal size, 12px gap: - **Apartment** — icon (building), title, sub: “Verify with your RWA admin” - **College** — icon (graduation cap), title, sub: “Verify with a .edu email” - **Tech park** — icon (briefcase), title, sub: “Verify with your company email” - **Custom** — icon (sparkle), title, sub: “Open to all — won’t show Verified badge” - Selected card: saffron border + saffron tint background - Primary button: “Continue” (disabled until selection)

Step 2 of 4 — Name your clan: - Heading: “Name your clan” - Three inputs stacked, 16px gap: - **Name** (label “Clan name”) — 3-30 chars, auto-trimmed, unique validation on blur. Example: “Sobha Dream Acres” - **Tag prefix** (label “Tag” + helper text “3-5 chars · shows next to member names”) — auto-uppercase, alphanumeric only. Example: “SDA” - **Description** (label “Description (optional)”) — multiline 3 rows, max 200 chars, char counter bottom-right - Live preview card below inputs showing how the clan will appear: `[TAG] Clan Name` with description - Primary: “Continue” (disabled until name + tag valid + unique)

Step 3 of 4 — Verify (conditional content based on type from Step 1):

Apartment: - “Verify your apartment” - Sub: “We’ll send a verification email to your RWA admin. They confirm in one click. Takes 24-48 hours typically.” - Input: RWA admin email - Input: Your block/wing identifier (optional, used to match other members in same complex) - “Send verification” primary

College: - “Verify your campus” - Sub: “Use your college-issued email. We check the domain only — we don’t read your inbox.” - Input: your `@yourcollege.edu` (or similar) email - We send a one-time code to that email; user enters 6-digit code - “Verify” primary

Tech park: - “Verify your workplace” - Sub: “Use your company email. We match against known Bangalore tech parks.” - Input: company email - Code verification flow (same as college) - “Verify” primary

Custom: - Skip the form, show “Custom clans aren’t verified” disclaimer card + “I understand, continue” button - Note in card: “Your clan will work the same, just without the Verified badge. You can re-create as a verified clan later if you want.”

Step 4 of 4 — Pick a clan color: - Heading: “Pick a clan color” - Sub: “This is different from your personal hex color. Hexes captured by your members get an outline in this color.” - 8 color swatches in a 4×2 grid (same 8 player colors from §2.1, but pick fresh) - Selected: saffron border around swatch + checkmark in center - Note: must be different from your personal hex color (greys out your current color) - Primary: “Create clan” (saffron, fires creation)

On submit: - Brief success screen: clan badge animates in with confetti, “You’re the Leader of [Clan Name]” - Auto-navigates to §6.21 Clan Hub after 2 seconds - Auto-creates an invite link for sharing

6.24 Clan Detail — Public View

(Phase 11)

Purpose: Read-only view of any clan that’s not yours (tapped from leaderboards or discovery).

Route: `/clans/[clanId]`

Layout:

1. **Header bar:** back arrow + clan tag prefix + clan name + share icon top-right
2. **Hero card** (same visual as §6.21 hero, but read-only — no settings access):
 - Clan badge, name, tag prefix, verified badge, type label, member count, founded date
 - Description text below meta (full text, not truncated)
3. **Headline metric row** (4 cells): Territory · Members · This month RP · Rank
4. **Action area** (sticky just under metrics):
 - **If user is NOT in any clan:** Primary button “Join clan” (full width)
 - **If user is in a DIFFERENT clan:** Secondary button “Switch clan” with warning sub-text “You’ll leave [Current Clan Name] and lose your contribution this month.”
 - **If user is in THIS clan:** Disabled grey button “You’re a member” (no action)
 - **If clan is Private (requires approval):** Button reads “Request to join” instead of “Join clan”
5. **Sub-toggle** (use §3.11): “Members” · “Activity”
6. **Members sub-tab:**
 - Top 5 members preview (with role badges), each row tappable to view profile
 - “View all 127 members” link → expands to full list
7. **Activity sub-tab:**
 - Recent clan-level events (last 14 days): new members joined, member captures of Rare+/Crown hexes, weekly clan war results, leadership changes
 - Each row: icon + descriptive text + relative time

Join flow: - Tap “Join clan” → confirmation sheet (use §3.6 bottom sheet) - Sheet content: clan badge + “Join [Clan Name]?” heading + body “You’ll appear in this clan’s leaderboard and your captures contribute to its territory.” + “Confirm join” primary + “Cancel” ghost - If switching clans: extra warning red card in the sheet - On confirm: brief saffron success animation, navigates to §6.21 Clan Hub

6.25 Clan Members & Roles

(Phase 11 — visible to Leader and Officer roles only)

Purpose: Manage clan membership and roles.

Trigger: Gear icon in §6.21 Clan Hub header (only visible if you’re Leader/Officer).

Route: `/clan/manage`

Layout (scrollable):

1. **Header bar:** back arrow + title “Manage [Clan Name]”
2. **Member stats card:** 4 small cells inline:
 - Total · Leader (always 1) · Officers (up to 5) · Members
3. **Pending requests section** (only shown if clan is Private and has incoming requests):

- Heading “Pending requests (N)”
 - Each row: avatar + name + level badge + “Joined X days ago on Hexa” subtext + Accept (saffron) and Decline (ghost) buttons
4. **Members list** (scrollable, sorted by contribution this month DESC):
- Each row: avatar + name + role badge ([Leader] / [Officer] / no badge for Member) + this-month RP right-aligned
 - Tap row → opens Member Actions sheet (bottom sheet)

Member Actions sheet: - Shows the tapped member’s profile preview at top (avatar, name, joined date, total clan contribution) - Action list (filtered by your role): - **Leader actions:** - “Promote to Officer” (if member is Member, and officers < 5) - “Demote to Member” (if member is Officer) - “Transfer leadership” (if member is Officer — gives them Leader, you become Officer) - “Kick from clan” (Hold-to-confirm §3.12, red) - **Officer actions:** - “Kick from clan” (Hold-to-confirm §3.12, red) — Officers can’t promote/demote - **Member actions** (when looking at yourself): - “Leave clan” (Hold-to-confirm, red)

5. **Clan settings section** (Leader only):
- “Edit clan info” → opens form with name/description/color fields editable
 - “Visibility” → toggle: Public (anyone can join) / Private (request to join)
 - “Invite link” → shows current link with regenerate option
 - **Dissolve clan** (destructive, red text, far bottom):
 - Tap → multi-step confirm: warning screen → re-enter clan name to confirm → Hold-to-confirm final
 - On dissolve: all members lose clan affiliation, clan badge/territory unassigned, clan name permanently locked (can’t be reused)

6.26 Feed — Explore

(Phase 13 — Month 5+)

Purpose: Hyperlocal discovery feed of captures, walks, and moments from across Bangalore (or filtered to your pincode). Gated until Level 2 to keep zero-investment accounts from spamming.

Route: `/ (tabs) / feed` — replaces the Friends tab in nav (Friends moves into Profile sub-section)

Layout (scrollable):

1. **Header bar:** title “Feed” + add-friend icon top-right (24px, person+)
2. **Primary sub-toggle** (use §3.11): “Explore” (default) · “Following”
3. **Secondary sub-toggle** (Explore tab only): “Bangalore” · “Your pincode” (default — saffron)
4. **City leaderboard link card** (top of feed, padding 16, ink.200 background, border radius `md`):
 - Trophy icon left + “Bangalore territory leaderboard” + “See top players city-wide” subtext + chevron right
 - Tap → opens dedicated full-screen leaderboard view (scope = Bangalore + All-time)
5. **Feed of posts** (infinite scroll, 16px vertical gap between cards):

Post types (auto-generated unless noted):

A. Capture moment card (auto-generated for Rare/Power/Crown hex captures, opt-in via Settings) - Avatar + name + clan tag prefix + neighbourhood + “captured a Power hex” + relative time - Below: a mini visualization of the hex (saffron filled hex with rarity glow) - Stats: “+170 IP · 8-day streak” - Action row: heart (like) + comment + share

B. Walk summary card (user-posted via Log Walk §6.19 “Show on Friends feed” toggle) - Avatar + name + clan tag + neighbourhood + walk title + relative time - Headline mini-metric row (use §3.14 at smaller scale): Distance · Duration · Hexes · IP - If photos attached (post-MVP): horizontal scroll of photos - Description text (if user added a note) - Map snapshot of route (square thumbnail) - Action row: heart + comment + share

C. Streak milestone card (auto-generated on 30/100/365-day streak, opt-in) - Avatar + name + “🔥 hit a 30-day streak” - Celebration visual (saffron gradient with flame icon) - Action row: heart only (no comments on milestones — keeps signal high)

D. Medal earned card (auto-generated, opt-in) - Avatar + name + “earned the Monsoon Warrior medal” - Medal icon (large, with tier color) - Action row: heart + comment

Card common chrome: - Background: `ink.200` - Border radius: `lg` (16) - Padding: 16 - Tap card → expand to full-screen detail (single-post view)

Empty states: - Bangalore feed, no posts yet (early MVP): illustration + “Bangalore is quiet today. Take a walk?” - Your pincode, no posts: “Nothing in [Pincode] yet. Be the first.”

Behavior: - Pull-to-refresh: saffron spinner - Posts cached locally; refetch on tab activation if older than 60 seconds - Each post has a 3-dot menu: Report, Mute @user (post-MVP), Hide (this post type from future) - Ghost Mode users do NOT appear in any feed regardless of post type (privacy override is absolute) - Posts are immutable once created — no edit, only delete (within 1 hour of post)

6.27 Feed — Following

(Phase 13)

Purpose: Friends and clan-mates' activity, plus your own composer for text/photo posts.

Route: `/ (tabs) / feed?tab=following`

Layout (scrollable):

1. **Header bar:** same as §6.26
2. **Primary sub-toggle:** "Explore" · "Following" (active)
3. **Visibility setting card** (sticky just below sub-toggle, can be dismissed once set):
 - Heading: "Who can see your activity?" (`label-md` , `ink.700`)
 - 3 radio options (full width each, stacked):
 - **Everyone** — anyone on Hexa can see your shared captures/walks
 - **Friends only** (default) — only accepted friends + clan-mates
 - **Just me** — your shared content shows in Explore but with anonymized "Someone in HSR" attribution
 - "Save" link right-aligned (only enabled after change)
4. **Friends counters row:** "Following 14 · Followers 9" with "Add friends" ghost button right
5. **Composer card** (just below counters):
 - Avatar (40px) + text input area
 - Placeholder: "What's on your walk? Share with friends."
 - Below input (when focused):
 - Photo icon (post-MVP, disabled with "Soon" badge in v1)
 - Location pin icon (auto-attaches current pincode/neighbourhood)
 - Privacy override toggle (defaults to your global setting)
 - "Post" primary button right (saffron, disabled until text entered, min 10 chars)
 - Max 500 chars, counter bottom-right when approaching limit
6. **Feed of posts** (same format as §6.26 Explore, but filtered to friends + clan-mates)

Empty states: - No friends followed yet: illustration of two avatars connecting + "Add friends to see their walks here." + "Find friends" primary

Behavior: - Composer posts appear immediately (optimistic UI), reconciled with server post-roundtrip - Friend posts arrive via Supabase Realtime when posted (live update without refresh) - Notifications: "@friend posted in your feed" push (if user has friend activity notifications on)

6.28 Feed — Locked State

(Phase 13 — for L1 users who tap the Feed tab before unlocking)

Purpose: Explain why Feed is gated and route users to the XP path that unlocks it.

Route: `/ (tabs) / feed` (rendered when user is L1)

Layout (full-screen, vertical center):

Use Feature Gate card §3.13 as the entire screen:

1. **Lock icon** (48px, `saffron.600`), centered
2. **24px spacing**
3. **Heading:** "Reach Level 2 to unlock Feed" (`display-sm` , `ink.900` , centered)
4. **8px spacing**
5. **Body:** "Until then, focus on capturing your first hexes. The feed is more fun when you're already playing." (`body-md` , `ink.700` , centered, max 320px wide)
6. **24px spacing**
7. **Level progress chip** (Badge §3.4, saffron tone): "Level 1 · 320 / 500 XP"
8. **24px spacing**
9. **Sub-heading:** "How to level up" (`label-md` , `ink.700`)
10. **Numbered list** (3 most-impactful actions):
 1. "Capture 3 hexes today" — +30 XP per day completed
 2. "Add a profile photo" — +10 XP (one-time)

3. "Use a referral code from a friend" — +20 XP (one-time)

11. **24px spacing**

12. **Primary button:** "Go to Profile" — takes user to Profile tab where XP Challenges live

Rationale (note kept in spec for reference): Gating Feed to L2 serves three purposes: 1. **Moderation:** prevents zero-investment accounts from spamming or harassing 2. **Quality:** feed posts come from users who've actually engaged with the game 3. **Progression hook:** gives L1 users a clear concrete reason to capture their first hexes

7. STATES

Every screen must define these 4 states:

Loading

- Use skeleton screens for content-heavy lists (avatar circle + 2 text bars)
- Use spinner for actions (button submission)
- Use a top progress bar for navigation transitions that hit network

Empty

- Custom illustration or large icon
- Heading + body explaining what to do
- Primary CTA to populate

Error

- Friendly tone, never blame the user
- Heading: "Something went wrong" or specific ("Couldn't load leaderboard")
- Body: brief explanation, not a stack trace
- Primary CTA: "Try again"
- Optional: "Contact support" link

Offline

- Detect via NetInfo
 - Show top banner: "Offline — actions will sync when you reconnect"
 - Disable any actions that need network (capture, leaderboard refresh)
 - Capture flow specifically: queue the capture locally, sync on reconnect (post-MVP — for v1 just block captures when offline)
-

8. MICROCOPY GUIDE

8.1 Tone

- **Conversational, not corporate.** "Looks like your GPS is having a moment" not "GPS signal acquisition failed."
- **Punchy, not verbose.** Cut by 30% from your first draft.
- **Indian English friendly.** Don't use "y'all," do use "let's go," "no worries," "got it."
- **No emojis in headings.** Emojis okay in body, badges, and notifications, but never in titles.
- **Numbers always tabular.** "13" not "thirteen" except in body prose.

8.2 Critical strings

Buttons: - "Capture this hex" (not "Capture") - "Send code" (not "Submit" or "Continue") - "Let's go" (final onboarding CTA — fun) - "Try again" (errors) - "Maybe later" (skippable prompts) - "Cancel" (destructive action escape) - "Start a walk" (not "Begin tracking") - "Hold to finish" (walk session end) - "Log walk" (post-session save) - "Discard walk" (destructive) - "Resume" (paused walk) - "Unlock +20 XP" (referral redeem)

Empty states: - Friends: "No friends yet. Add some — competing alone is no fun." - Medals: "No medals yet. Capture your first hex to break the seal." - Leaderboard (friends): "Add friends to start a rivalry." - Captures: "No captures today. Step outside?" - Walks: "No walks logged yet. Lace up?" - Referrals: "No referrals yet. Share your code — every friend = +50 XP." - XP Challenges (all

done): “All caught up. New challenges drop weekly.”

Errors: - “Couldn’t reach the server. Check your connection?” - “We can’t find that user.” - “Wrong code. Try once more?” - “Hmm, that didn’t work. Let’s try again.” - “Couldn’t save your walk. Your captures are safe — try logging again?” - “That referral code didn’t match. Double-check the spelling?” - “You’ve already used a referral code. One per account.” - “GPS signal weak. Move to an open area?”

Walk session (Phase 10): - Start screen heading: “Ready when you are.” - Start screen subtext: “Captures still happen automatically. Sessions just track stats and let you share the route.” - Pause toast: “Walk paused. Resume when you’re ready.” - Auto-end notification: “Walk ended — no movement for 15 minutes. Saved what we had.” - Travel mode warning: “🚶 Going too fast. Walks need to stay under 10 km/h.” - Finish success toast: “Walk logged. +{N} IP from {N} captures.” - Discard confirmation: “Discard this walk? Your captures stay — only the route record goes.”

Clans (Phase 11): - Find clans CTA: “Find a clan” - Create clan CTA: “Create a clan” - Join action: “Join clan” - Switch warning: “You’ll leave [Current Clan] and lose your contribution this month.” - Leader role: “Leader”; Officer: “Officer”; Member: no badge - Apartment type sub: “For people in the same building or complex” - College type sub: “For people on the same campus” - Tech park type sub: “For coworkers in the same office park” - Custom type sub: “Open to anyone. Won’t show the Verified badge.” - Verified badge tooltip: “Verified by an admin” - Solo clan empty: “Your clan needs members. Share your link to grow.” - Promote confirm: “Promote @user to Officer?” - Demote confirm: “Demote @user to Member?” - Kick confirm: “Kick @user from the clan?” - Transfer leadership confirm: “Make @user the Leader? You’ll become an Officer.” - Dissolve warning: “Dissolve [Clan Name]? All members will leave. This can’t be undone. The name is permanently locked after dissolving.” - Pending request: “@user wants to join. Accept?” - New member notification: “👤 @user joined [Clan Name].” - Clan war result: “Clan war week ended. [Clan Name] finished #3 in 560102 — +200 XP for every member.”

Feed (Phase 13): - Composer placeholder: “What’s on your walk? Share with friends.” - Empty Bangalore feed: “Bangalore is quiet today. Take a walk?” - Empty pincode feed: “Nothing in [Pincode] yet. Be the first.” - Empty Following: “Add friends to see their walks here.” - Capture moment auto-post: “@user captured a Power hex in [Neighbourhood]” - Walk summary post intro: “@user walked [Distance] in [Neighbourhood]” - Streak milestone post: “👤 @user hit a 30-day streak.” - Medal earned post: “@user earned the [Medal Name] medal.” - Locked state heading: “Reach Level 2 to unlock Feed” - Locked state body: “Until then, focus on capturing your first hexes. The feed is more fun when you’re already playing.” - Report option: “Report this post” - Hide option: “Hide posts like this” - Delete option (own post): “Delete post” - Delete confirm: “Delete this post? Can’t undo.”

Referrals: - Empty code input placeholder: “HEXA-XXXXXX” - Share message text (sent to friends): “Walk Bangalore with me on Hexa 📄 Use my code HEXA-A7B3K9 for +20 XP → hexa.app” - Inviting user notification on entrant signup: “👤 @rohit_walks joined with your code. +50 XP when they hit Level 2.” - Inviting user notification on entrant L2: “@rohit_walks hit Level 2 — +50 XP for you!”

Notifications (push): - Hex stolen: “@priya_walks just stole 2 of your hexes in HSR. ☹️” - Streak at risk: “👤 Your 12-day streak is at risk. One walk saves it.” - Level up: “Level up! You’re now L3 Patroller. Clans unlocked.” - Brand voucher arrived: “👤 Your Third Wave voucher is here. Redeem in Bazaar.” - Re-engagement (7 days inactive): “Bangalore is missing you. Your hexes are slipping.” - Walk milestone: “Your 10th walk this month. Look at you go.” - New XP challenge: “New challenge: Capture a Crown hex. +100 XP.” - Next unlock close: “200 XP from unlocking Clans. One good walk does it.”

8.3 What NOT to say

- “Members” — say “players”
- “Activate” — say “turn on”
- “Subscribe” — say “join” or “get [Pro]”
- “Premium” — say “Pro”
- “Earn” — be careful with this word. Use “collect” or “win” or “get” instead. “Earn rewards” raises gaming-act compliance flags.
- “Cash,” “money,” “rupees” — never in reward context. Use “vouchers,” “perks,” “treats.”
- “Win cash” — never. “Win a free coffee” is fine.

9. ACCESSIBILITY

9.1 Touch targets

- Minimum: 44×44 (Apple HIG) / 48×48 (Material). **Use 48 as the floor in Hexa.**
- All interactive elements must hit this.

9.2 Contrast

- Body text on background: minimum 7:1 (AAA)
- UI elements: minimum 3:1

- Test all saffron-on-dark combinations; `saffron.600` on `ink.50` is 4.8:1 (passes for UI, marginal for text — never use `saffron.600` for body copy)

9.3 Screen reader

- All icon-only buttons must have `accessibilityLabel`
- Hex map: provide a list-mode toggle that lets screen reader users navigate hexes as a list (post-MVP)
- Live regions for capture timer (“13 seconds remaining”)
- Alerts use `accessibilityLiveRegion="polite"`

9.4 Reduced motion

- Detect `AccessibilityInfo.isReduceMotionEnabled()`
- When enabled:
 - Replace celebrations with simple fade-in
 - Disable confetti
 - Reduce shake animations
 - Keep functional animations (timer progress, map pan)

9.5 Dynamic type

- Respect iOS Dynamic Type up to XL (don’t honor accessibility XL — layout breaks too much for v1)
- Use `react-native-size-matters` or similar for proportional scaling

9.6 Color blindness

- Never rely on color alone — pair every color signal with an icon or text
- Hex ownership: color + (subtle pattern overlay for the colorblind setting in profile, post-MVP)
- Streak: flame icon, not just orange
- GPS quality: text label “+18m”, not just a colored dot

END OF DESIGN SPEC

Companion docs: - `HEXA_BUILD_SPEC.md` — full technical build spec - `HEXA_DESIGN_TOKENS.json` — machine-readable tokens (generate from §2 if needed) - Figma file (to be created from this spec)

For Claude Code: When implementing any screen, the order of authority is: 1. This design spec (visual + interaction) 2. The build spec (data + logic) 3. Patches/amendments file (corrections to either) 4. Ask before assuming.
